

Make the first inbox checkable.

A proposed completion card for the Mermail quickstart.

One identifiable test message. A visible finish line: the right email arrives and the agent produces a relevant draft for review.

01 / Suggested completion card

01

SEND Send a harmless test email from another account with a unique subject, such as **Inbox check 8472**.

02

FIND Locate that exact subject in the selected mailbox. Confirm that the sender and body match your test.

03

DRAFT Ask the agent to find the message, summarize it, and prepare a reply for your review.

04

VERIFY Confirm the draft refers to the correct message and is ready for you to review.

02 / Validation status

This independent draft is based on public documentation. It is not endorsed by Mermail or tested in an authenticated workspace. The paid scope would verify the instructions in an agreed test workspace and correct any mismatch.

A focused next step

Up to two documentation pages and one agreed walkthrough. **600 USDC**: 300 to start, 300 after acceptance. Delivery within 48 hours after scope, test access, and deposit are confirmed.
